

Alexis earned a Ph.D. from ESPCI in 2013 after working with Dr. Christophe Meyer and Pr. Janine Cossy on the reactivity of cyclopropenes towards transition metal catalysts. After postdoctoral training with Tomislav Rovis (Colorado State University, USA) and Jacques Maddaluno (IRCOF, Rouen), he started his independent career in 2017 at Ecole Polytechnique as a CNRS researcher. His interests deals with the developement of new methods towards the efficient formation of nitrogen heterocycles using modern organocatalysis and organotransition metal chemistry.
